# Steven B. Egnaczyk

GitHub: https://github.com/StevenEgnaczyk | Portfolio: www.stevenegg.com

**The Ohio State University: College of Engineering** **May 2025**
*M.S in Computer Science and Engineering - AI Specialization* *Columbus, OH*

- **Honors:** National Buckeye and Provost Scholarships (2020 - 2024); Dean's List 5 Semesters **GPA:** 3.61/4.0
- **Relevant Coursework:** Artificial Intelligence, Neural Networks, High-Performance Deep/Machine Learning, Data Mining, Software Engineering for Artificial Intelligence, Software Startups, Advanced Algorithms, Advanced OS

## SUMMARY

Associate Product Manager with experience owning agency integrations end-to-end in the insurtech space. Track record of shipping business-impacting products to reduce agency overhead, streamline workflows, and translating ambiguous partner requirements into structured, production-ready solutions.

## PROFESSIONAL EXPERIENCE

**Insurify** · *Insurance aggregator · $600M Series B · $50M → $800M ARR* **June 2025 - Present**
*Associate Product Manager* *Boston, MA*

- Scoped and led an end-to-end AI voice agent POC to automate 100% of inbound customer service calls, enabling self-serve workflows for reinstatements, ID card delivery, and payment collection - reducing reliance on live agents.
- Drove execution of a suite of agency-facing features, including automated carrier-portal scrapers, dynamic reshopping, and an LLM-powered chatbot resulting in 33% QoQ agency sales growth and a 10% conversion lift.
- Defined requirements and oversaw rollout of a contextual multi-arm bandit traffic routing system, dynamically allocating lead volume across purchase channels for 80,000 monthly users to maximize conversion efficiency.
- Owned QA strategy and execution across 100+ insurance API integrations, improving price accuracy and quoting success rate by 10%, recovering an estimated $1.5M in otherwise lost sales.
- Designed and shipped a self-healing VIN selection system that automatically surfaces optimal vehicle data at RC1 based on historical provider quoting patterns, reducing vehicle-related error rates by 80% in pilot.
- Served as the primary PM for carrier partnership integrations, managing end-to-end requests across migration, filter rule updates, and traffic toggling for 100+ carrier relationships including Allstate and National General.
- Owned technical servicing for Insurify Car, using Datadog to triage payment and integration errors, driving ticket rate down from 10% to 3% through systematic root cause analysis and coordinated fixes with engineering.

**Vanguard** · *Asset manager · $10T AUM · Fortune 500* **October 2023 - June 2025**
*Data Analyst* *Malvern, PA*

- Led cross-functional development of an internal macroeconomic data pipeline aggregating time series from sources including the Federal Reserve and Bureau of Labor Statistics, improving data accessibility for ML modeling teams.
- Scoped and evaluated deep learning approaches to improve housing turnover rate predictions in mortgage-backed securities, testing integration of lagged macroeconomic variables to improve time-series accuracy.
- Conducted exploratory data analysis on emerging datasets to assess feasibility for inclusion in production prediction models, informing roadmap decisions on data sourcing.

## PROJECTS

**Spot** · *Social Accountability App* *January 2025 - July 2025*

- Co-founded and launched Spot, a social fitness accountability iOS app built with Swift/SwiftUI and Supabase, beta-testing with 50 monthly active users within the pilot release cycle.
- Led full-stack product development, shipping near-daily updates featuring group streaks, push notifications, and progress visualization while achieving Apple Store compliance and filing as an LLC.
- Drove early-stage business development, including investor outreach, pitching at student VC summits and Show OH/IO, and building a marketing strategy spanning influencer partnerships, campus advertising, and local events.

**NullPointerException** · *Educational YouTube Channel* *August 2019 - August 2022*

- Demonstrated advanced comprehension of computer science topics, including data structures, sorting algorithms, and software engineering fundamentals, through the curation of 50+ free lecture-style videos.
- Collaborated with larger YouTube channels, such as FreeCodeCamp, to promote content to a broader audience.
- Accumulated over 15 million views across all platforms, partnering with channels boasting 10 million+ subscribers.

## SKILLS

**Technologies:** SQL, Mode, Hex, MixPanel, Figma, Front, Asana, Growthbook, Eppo, GitHub, Salesforce, Notion, Confluence, Datadog, Postman, Python
